

Vehicles Registered

2023-01-17

Vehicles Registered in California

The California DMV releases data on the number of registered vehicles by model year, make, and fuel type by Zip Code. This allows for calculating what percent of vehicles registered are electric vehicles or by brand for every model year.

Clearly, the number of electric vehicles is growing in California. Most of these electric vehicles are from Tesla. The data can be found here: <https://data.ca.gov/dataset/vehicle-fuel-type-count-by-zip-code>
